

AGORA Plattform

Main Idea

AGORA Plattform was founded to create a trading platform with cryptocurrency.

The assignment and uniqueness of AGORA is to solve many pressing problems:

Decentralization and freedom of trade;

Multi-level solution of conflicts between buyer and seller until consensus is found;

Logical structured catalog for a comfortable search of products;

Multilingualism;

Minimal trade fee of 1% for additional platform services;

Participation of all AGORA holders in resolving pressing issues collegially by voting.

Technology

The ecosystem will be based on PoW/PoS/MN. In the process of technological discussion, an actual plan of realization will be developed. Trading operations are performed directly peer-to-peer with an escrow connection, if consensus is needed.

Ecosystem

For coin holders, 20% annual dividends are provided. Also, stabilization steps will be taken to maintain the course.

Legality

For operation of the technical services and support services a company will be established in the Swiss canton Zug. The legal form will be determined by voting of AGORA holders. Physical assets like real estate, precious metals and fiat currencies will allow the project to remain stable.
